

Alternative 1: New upstream bridge

- Existing eastbound bridge becomes westbound
- Existing westbound bridge is removed

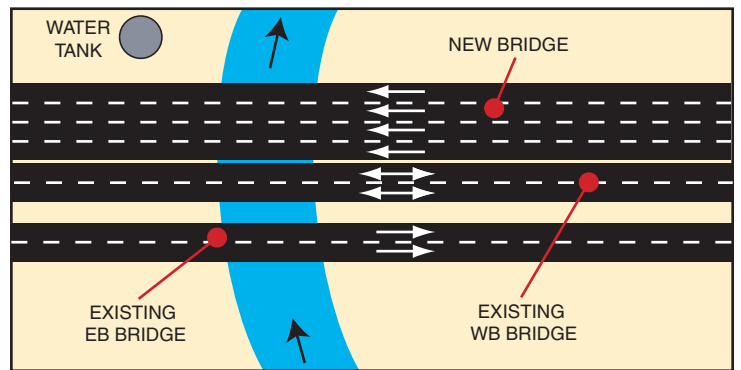

Alternative 2: New upstream eastbound bridge

- Existing eastbound bridge becomes westbound
- Existing westbound bridge remains westbound

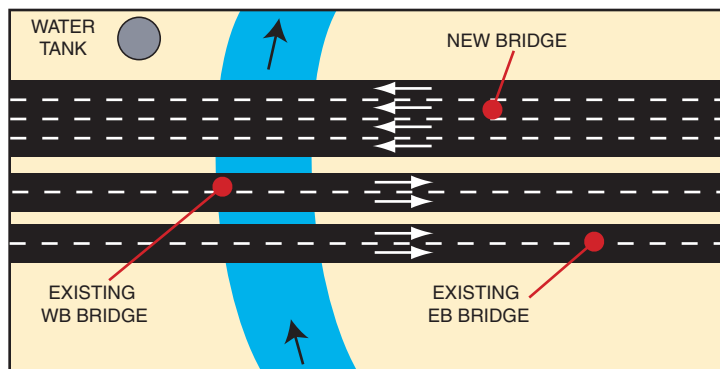

Alternative 3: New downstream bridge

- Existing eastbound bridge remains eastbound
- Existing westbound bridge is removed

Alternative 4: New downstream westbound bridge

- Existing eastbound bridge remains eastbound
- Existing westbound bridge becomes reversible serving peak direction of flow

Alternative 5: New downstream westbound bridge

- Existing eastbound bridge remains eastbound
- Existing westbound bridge becomes eastbound
